DAIKIN

Chillers

Commercial and Technical Data

Air Cooled Multiple Scroll Chillers

- Multiple compressors per circuit
- Reliable and efficient scroll with high EER values
- Easy 'plug and play' installation
- Safety valves in each circuit
- Electronic expansion valve
- True dual plate brazed plate heat exchanger
- Separate switchbox for easy access

ECDEN11-405

HYDROCUBE

R-410A

EWAQ-DAYN
EWYQ-DAYN

Daikin Europe N.V.

About Daikin

Daikin has a worldwide reputation based on over 85 years' experience in the successful manufacture of high quality air conditioning equipment for industrial, commercial and residential use. Daikin's much envied quality quite simply stems from the close attention paid to design, production and testing, as well as aftersales support. To this end, every component is carefully selected and rigorously tested to verify its contribution to product quality and reliability.

Introduction

The Daikin Hydrocube multiple scroll chiller represents a combination of technological innovation and control strategy within a single chilled water package. The unit offers a comprehensive and energy efficient solution capable of adapting to meet the needs of the most exacting project requirements. The unit is reliable and efficient due to its multiple compressors and refrigerant circuits running on R-410A and features electronic expansion valves and a low noise level. Installation is easy by virtue of its integrated hydronics. Furthermore, electronic control of the unit is considerably improved by the new control platform plus its connectivity to the Daikin Intelligent manager and I-touch controller.

Air cooled chillers

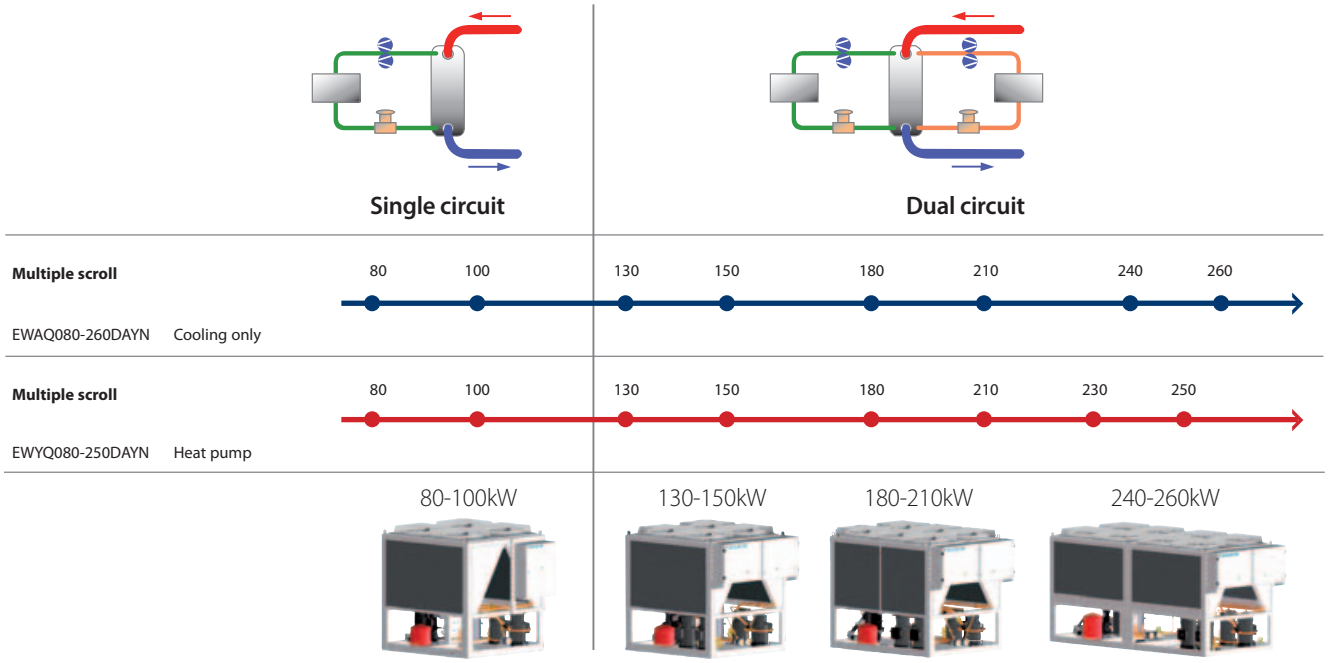
In the chilled water market, chillers of the air cooled type are most frequently used. Out of its wide range of chillers in cooling only or heat pump version, with of without integrated hydronic components, Daikin always offers you a chiller fitting your application needs.

Table of Contents

Air Cooled Multiple Scroll Chillers

Wide application range

Cooling only versions and heat pump versions are available between 80 and 260 kW



EWAQ-DAYN **N** = Standard model

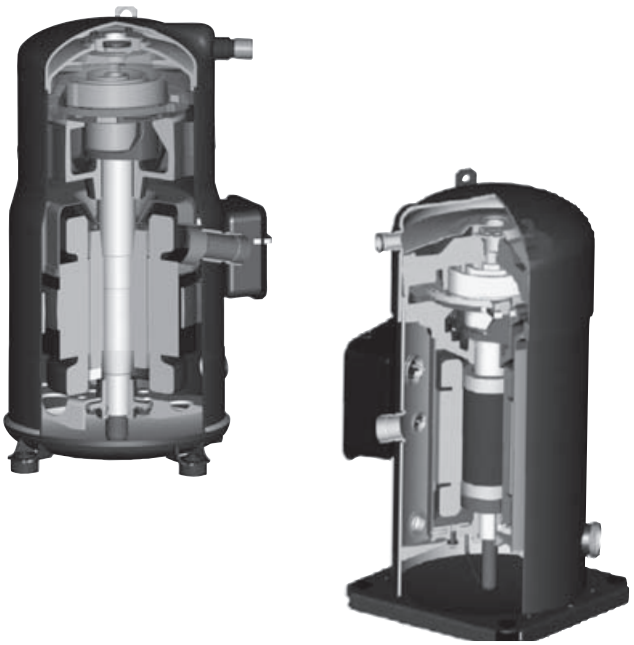
EWAQ-DAYN **P** = Standard model + single pump (OPSP)

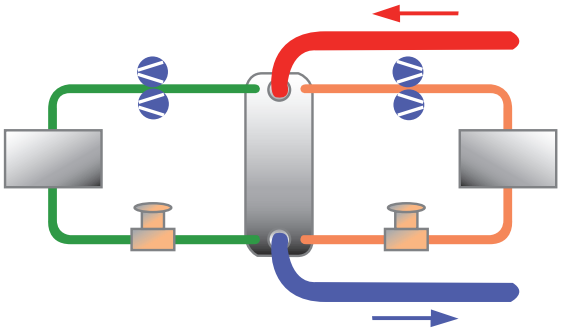
EWAQ-DAYN **B** = Standard model + single pump (OPSP) + buffer tank (OPBT)

Increased reliability and efficiency via multiple refrigerant circuits and multiple compressors per circuit

Multiple scroll compressors

Multiple scroll compressors per unit increase reliability and improve partial load efficiency. A high partial load efficiency with an average ESEER of 4.16 is feasible over the whole range. The unit incorporates highly reliable and efficient scroll compressors (average EER = 2.8), for outstanding performance at a low sound level over a wide range of operating conditions.





Multiple refrigerant circuits

Tandem scroll compressors on fully independent refrigerant circuits ensure high reliability: if one refrigerant circuit breaks down, the remaining circuits keep operating. A dual circuit heat exchanger (from >100kW) provides excellent part load conditions.

Electronic expansion valves as standard

The advanced electronic expansion valve reacts quickly to changes in conditions within the unit's wide operating range. Direct control of the system superheat maximises usage of the evaporator at much lower condensing temperatures. This leads to optimised energy consumption at low ambient or partload operation.

Integrated hydronics

The multiple scroll chillers come with various associated hydronic component packages to suit customer requirements. Standard fitted hydronics – water filter, air purge and flow switch – are fully integrated within the chiller unit and additional space is available for further optional components. Unit layout is such that all hydronic components can be accessed easily from 3 sides for maintenance purposes.

Integration of the optional components enables the chiller to be made operational in the shortest possible time without the need to add pumps, buffer tanks and expansion tanks etc.

Optional hydronics

Various pump options are available comprising different modular concepts providing flexibility in customer choice.

> **Single pump** (OPSP) – available ESP at nominal flow rate of 120kPa, shut-off valves on the water side and water manometer. A 35 or 50 litre expansion tank is also included.

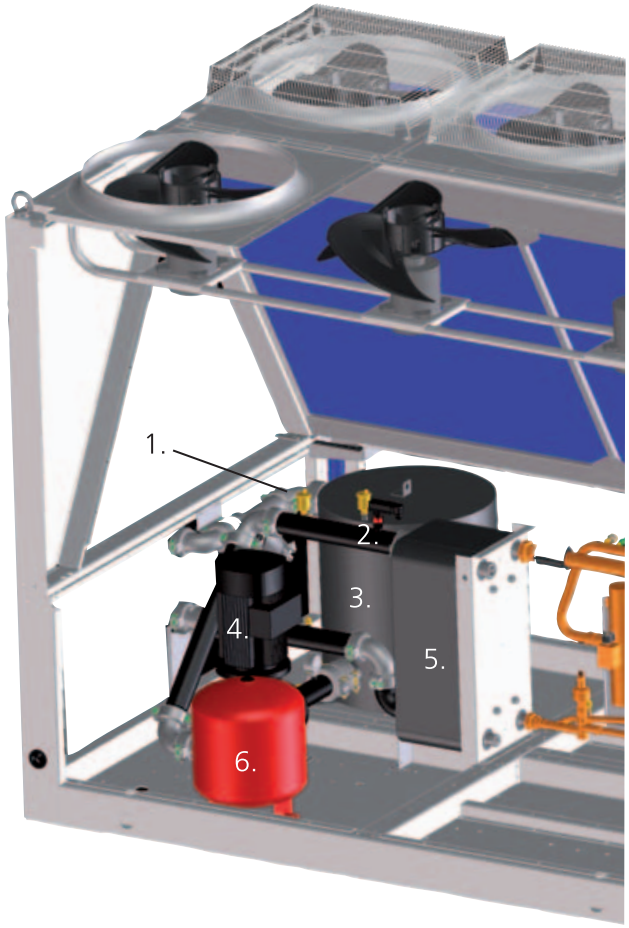
> **High ESP pump** (OPHP) – available ESP at nominal flow rate of 200kPa.

> **Twin pump** (OPTP) – twin pump motors with a single housing.

> **Built-in buffer tank** (OPBT) – includes a 200 litre buffer tank and is based on the OPSP or higher specification. The choice of this option substantially reduces chiller installation time.

> **Regulating valve** – included with pump options to enable the control of the water flow rate in the system.

> **Low temperature options**
- Low LWE down to -10°C (OPZL)
- Evaporator heater tape for low ambient climates (OP10)



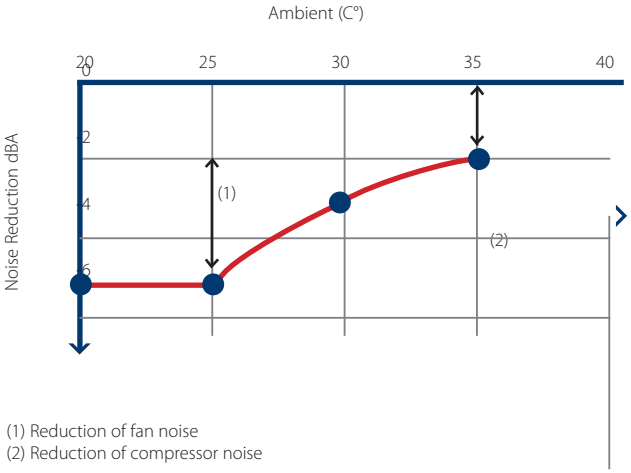
1. Air vent
2. Flow Switch
3. Buffer tank
4. Pump
5. Brased plate heat exchanger
6. Expansion vessel

Low operational sound level

Sound suppression is given high priority by Daikin.
For those particularly sound sensitive applications where the standard average sound level of 89 dBA does not offer the desired sound level, OPLN (option low noise) further reduces the operational sound level by 5 dBA. Particular attention has been given to any component that can generate sound or vibration.

Option low noise consists of compressor jackets, insulated cabinet and inverter fans.
Inverter fans offer a linear sound reduction in function of the ambient.

Inverter fans (OPIF):



(1) Reduction of fan noise
(2) Reduction of compressor noise

In addition, the inverter fans offer stable condensing pressure at low ambient temperatures, allowing more efficient partload operation of the unit.

Easy installation and maintenance

All hydronics can be accessed simply from three sides, while the separate switchbox is also easily accessible from the side of the unit, facilitating the maintenance of the chiller.

The compactness of the unit allows it to be easily transported and manoeuvred into its final position. Due to the integrated hydronic components, the chiller can be easily connected to the system.

High corrosion resistance

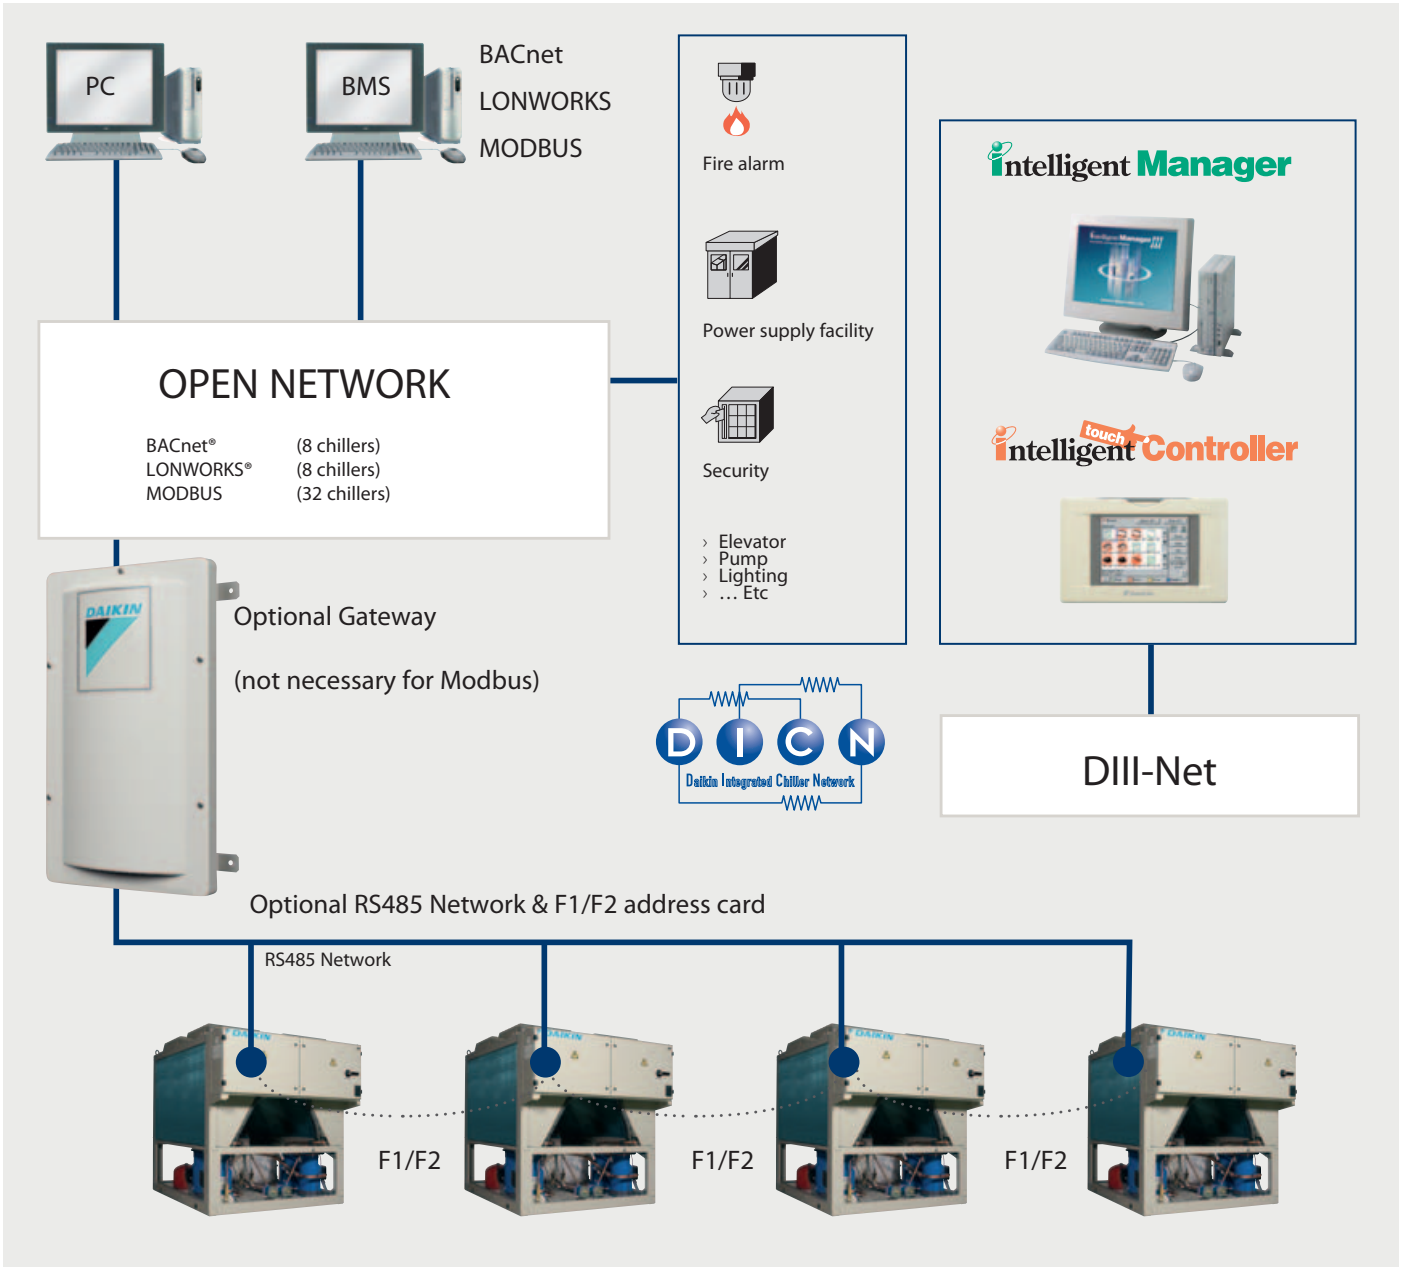
The robust all-weather chassis can stand up to demanding urban and industrial environments. The high-quality Daikin plate work consists of a galvanized steel plate with a zinc phosphate coating, and is epoxy powder painted. Condensers are standard PE treated, increasing resistance to acid rain and saline corrosion.

R-410A refrigerant

R-410A was the logical choice for the Daikin multiple scroll chiller because today it is one of the most promising refrigerants in terms of efficiency, stability and environmental impact.

R-410A offers a small swept volume, a good heat exchange capacity and leads to reduced component sizes of items such as heat exchangers and tubing.- Evaporator heater tape for low ambient climates (OP10)

Electronic Control



Integration in building management systems

The PCASO control platform can be integrated into various Building Management Systems. An RS485 supervisiory network, more commonly known as MODBUS, can control up to 32 chillers. By using an optional gateway for either BACnet or LONWORKS, a maximum of 8 chillers per gateway can be controlled.

Protocols are: BACnet
LONWORKS
MODBUS

Communication with other Daikin units (DIII-Net)

For easy integration with Daikin DX products, the chillers can communicate via the F1/F2 terminals on DIII-net. In addition communication to Daikin D-BACS devices such as Intelligent Manager and I-Touch controller is possible.

New control platform

The Multiple Scroll Chiller incorporates the latest Daikin controller (PCAS0) with a new powerful LCD interface, offering accurate control of all functional parameters in an extremely user-friendly way.

Daikin integrated chiller network (DICN)

The Daikin in-house developed hardware and software offers the possibility of DICN functionality, allowing simultaneous operation of up to 4 chillers. By using the optional address card EKACPG (one per integrated chiller), the DICN enables you to operate a 1.1 megaWatt chiller from a single controller.

TABLE OF CONTENTS

EWAQ-DAYN

1 Features

- Wide capacity range: 80 to 260kW with 8 cooling only models
- Optimised for use with R-410A
- Multiple refrigerant circuits and multiple compressors per circuit
- Reliable and efficient scroll with high EER values
- Anti-corrosion treated aluminium coils
- Low operating sound level
- Easy 'plug and play' installation
- Unit dimensions allow easy transportation
- Fans protected against abnormal operation (4 to 8 fans depending on unit size)
- Safety valves in each circuit
- Electronic circuit breakers
- Electronic expansion valve
- True dual plate brazed plate heat exchanger
- Sight glass
- All hydronics can be accessed easily from 3 sides (no surrounding cabinet)
- Separate switchbox for easy access
- Compressors and controls at unit side
- Increased reliability via 2 independent refrigerant circuits
- Double circuit heat exchanger (from 100kW onwards)
- Non hermetic filter/dryer
- Daikin Pcaso controller with user friendly and powerful LCD interface

SYMBOLS

CC : Cooling capacity (kW)
PI : Power input (kW)
LWE : Leaving Water Evaporator temperature (°C)
Tamb : Ambient temperature (°C)

NOTES

1. Cooling capacity (kW)
   Capacity is according to Eurovent rating standard 6/C/003-2006 and valid for chilled water range Dt = 3 - 8°C
2. Power input (kW)
   Power input is total input according to Eurovent rating standard 6/C/003-2006: Compressor + fans + control circuit
3. For units with integrated heat pump
   Values for CC are to be multiplied by 0.99 in order to compensate heat input of the pump
4. Additional ESP can be added to the fans discharge
   The following impact on the performance has to be considered

ESP (Pa)	CC %	PI %
25	99	101
50	98	103
75	96	105

Where
ESP = External static pressure applied at nominal unit airflow.

SYMBOLS

CC : Cooling capacity (kW)
PI : Power input (kW)
LWE : Leaving Water Evaporator temperature (°C)
Tamb : Ambient temperature (°C)

NOTES

1. Cooling capacity (kW)
   Capacity is according to Eurovent rating standard 6/C/003-2006 and valid for chilled water range Dt = 3 - 8°C
2. Power input (kW)
   Power input is total input according to Eurovent rating standard 6/C/003-2006: Compressor + fans + control circuit
3. For units with integrated heat pump
   Values for CC are to be multiplied by 0.99 in order to compensate heat input of the pump
4. Usage of glycol and other anti-freeze
   Correction factors for CC and PI are applicable according type and concentration of the used anti-freeze

3TW57572-1D

LEGEND

Translation of this legend can be found in the installation manual.

	Not included with standard unit	
	Not possible as option	Possible as option
Obligatory	#	##
Not obligatory	*	**

: Field wiring

: Several wiring possibilities

: Dipswitch set on left position

Part number		Description
A02P	**	Communication PCB (EKACPG)
A4P		PCB wired remote control
A5P	**	PCB wired remote control (EKRUPG)
E5H	*	fieldheater
F1,F2,F3	#	main fuses
F4,F5	#	fuses for heaters
H11,12,21,22P		indication lamp: operation compressor
H1P	*	indication lamp: alarm signal (default NO)
H2,3,4,5,6P	*	indication lamp for changeable digital outputs
K1P	##	pump contactor (Only OPSP/OPHP/OPSC/OPTP/OPTC)
K2P	**	pump contactor (Only for OPTP/OPTC)
K1S	*	overcurrent relay pump (P/B unit or OPSC)
M1P	*	pump motor 1 (Only OPSP/ OPHP/OPSC/OPTP/OPTC)
M2P	*	pump motor 2 (Only for OPTP/OPTC)
R8T	*	temperature sensor for changeable analog input
S1M		main isolator switch
S1,2,3,4,5S	*	switch for changeable digital input
S2M	#	heatertape isolator switch
V2C	**	ferrite core (EKACPG)

Options (factory installed)	
OPSP	=Single pump
OPTP	=Twin pump
OPSC	=Single pump contactor
OPTC	=Twin pump contactor
OPHP	=Hi ESP pump
OPIF	=Inverter fans

Options (user installed)	
EKACPG	=Address card including
	-RS 485 (Integrated modbus)
	-F1,F2 (DCIN+DBACS connection)
EKRUPG	=Remote user interface

N-Model	=unit with no options included
Ch.	=Changeable

Changeable I/O possible functions

Refer to the installation manual for instructions how to configure changeable I/O

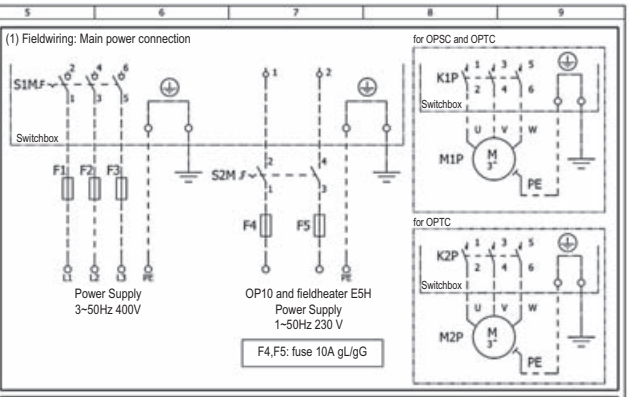
Changeable digital input (4 available)
-None -Status -Dual setpoint -Remote on-off -Capacity limitation 25%,50%,75% or setting -Low noise (only for OPIF) -Free cooling signal -Fan forced on

Changeable analog output (1 available)
-None -Unit Capacity (mA,V) -Details of types Type mA: 0..20mA/4..20mA Type V: 0-1V/0-5V/0-10V

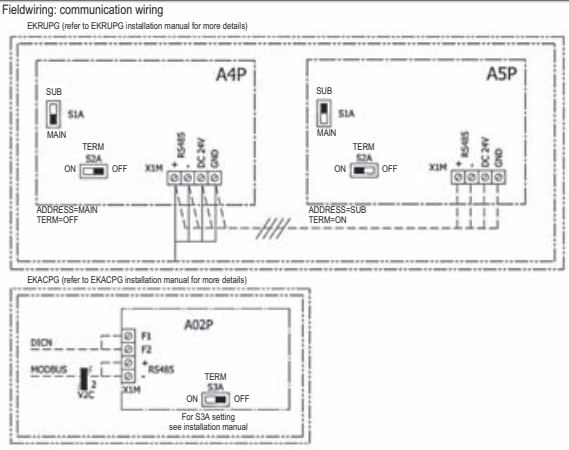
Changeable digital output (6 or 5 available depending on unit)
-None -Closed -2nd pump -100% capacity -Full capacity -Free cooling -General operation -Safety+warning NO -Safety+warning NC (only for Ch.DO1) -Safety NO (excluding warning) -Safety NC (excluding warning) (only for Ch.DO1) -C1,C2 Safety NO -Warning NO -C1,C2 operation -Cooling (only EWYQ) -Heating (only EWYQ) -Defrost (only EWYQ)

Changeable analog input (4 available)
-None -Status (mA,V,NTC*,DI) -Floating setpoint (mA, V, NTC*) -Water temperature measurement (NTC*) -Changeable DI, refer to Ch DI for possibilities (DI) -Details of types: Type mA: 0..20mA/4..20mA (internal 5V or external power supply) Type V: 0-1V/0-5V/0-10V Type DI: DI (5V detection) *: for allowed NTC types and how to configure the software please contact your local dealer.

(1) Fieldwiring: Main power connection

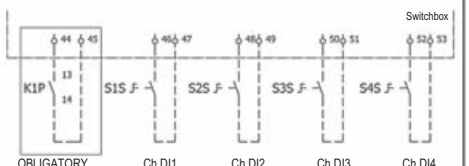


(1) Fieldwiring: communication wiring

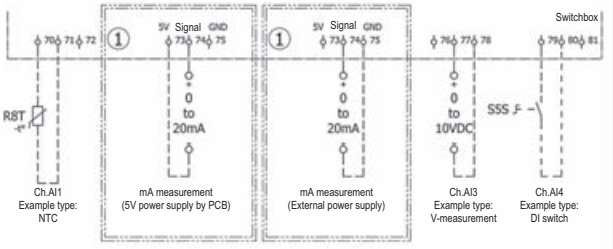


DAIKIN	Description: Connection diagram		Drawing number: 4TW57579-2	Revision: B	Page: 1
		Unit name: EWAQ/EWYQ 80-260			

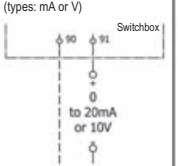
(3) Fieldwiring: Digital input terminals



(4) Fieldwiring: Analog input terminals
(connection is depending on type setting: NTC or mA or V or DI)



(5) Fieldwiring:
Analog output terminals
(types: mA or V)



(6) Fieldwiring: Output terminals

NOTES

1 Values of Sound power according to ISO9614-2

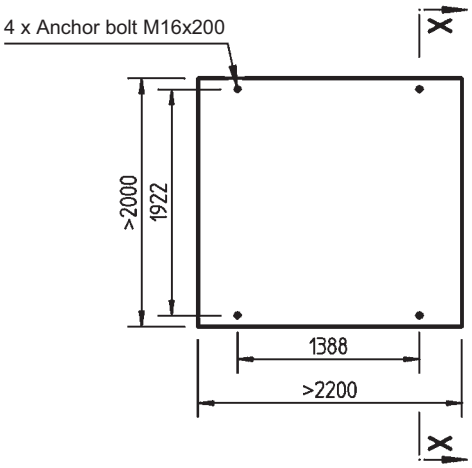
2 LWE= Leaving Water Evaporator temperature (°C)
Tamb= Ambient temperature

4TW57577-1C

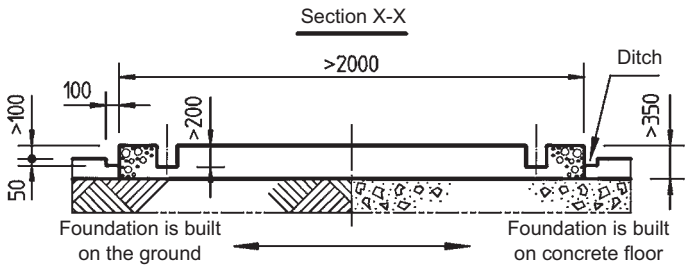
9 Installation

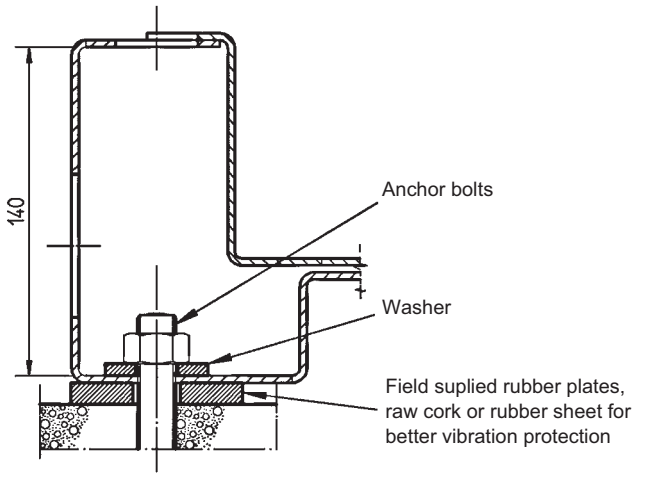
9 - 1 Fixation and Foundation of Units

EWAQ-EWYQ080-150DAYN(N-P- B)



Fix anchor bolts into the concrete foundation. The concrete foundation should be higher than the floor level by approximately 100 mm for ease of plumbing work and better drain. Further, strength of the floor should be sufficient to support the weights of concrete foundation and unit.
Be certain that foundation surface is even and flat.





NOTES

1 The measurement tabulated is based on the fact the base is made in the ground or on a concrete floor. In case the base is made on a concrete floor. In case the base is made on a rigid concrete floor, it is possible to include thickness of concrete floor, in that of the base.
2 In case a base is made on concrete floor, be sure to provide a ditch as shown. It is important to extract drainage regardless of wether a base is made in the ground or on the concrete floor. (Ditch → Sewerage).
3 Ingredient ratio of the concrete is cement: 1, sand: 2, gravel: 3, which is standard and insert iron bars of ∅10 at every interval of 300mm. The edge of the concrete base should be planed.

4TW57599-1

9 Installation

9 - 1 Fixation and Foundation of Units

EWAQ-EWYQ180-210DAYN(N-P-B)

3TW50179-1

1 Names, definitions and units are according to JIS K 0101. Units and figures between brackets are old units published as reference only.

2 In case of using heated water (more than 40°C), corrosion is generally noticeable.
Especially when the iron material is in direct contact with water without any protection shields, it is desireable to give the valid measures for corrosion. e.g. chemical measure.

3 In the cooling water using hermetic cooling tower, dosed circuit water is according to heated water standard, and scattered water is according to cooling water standard.

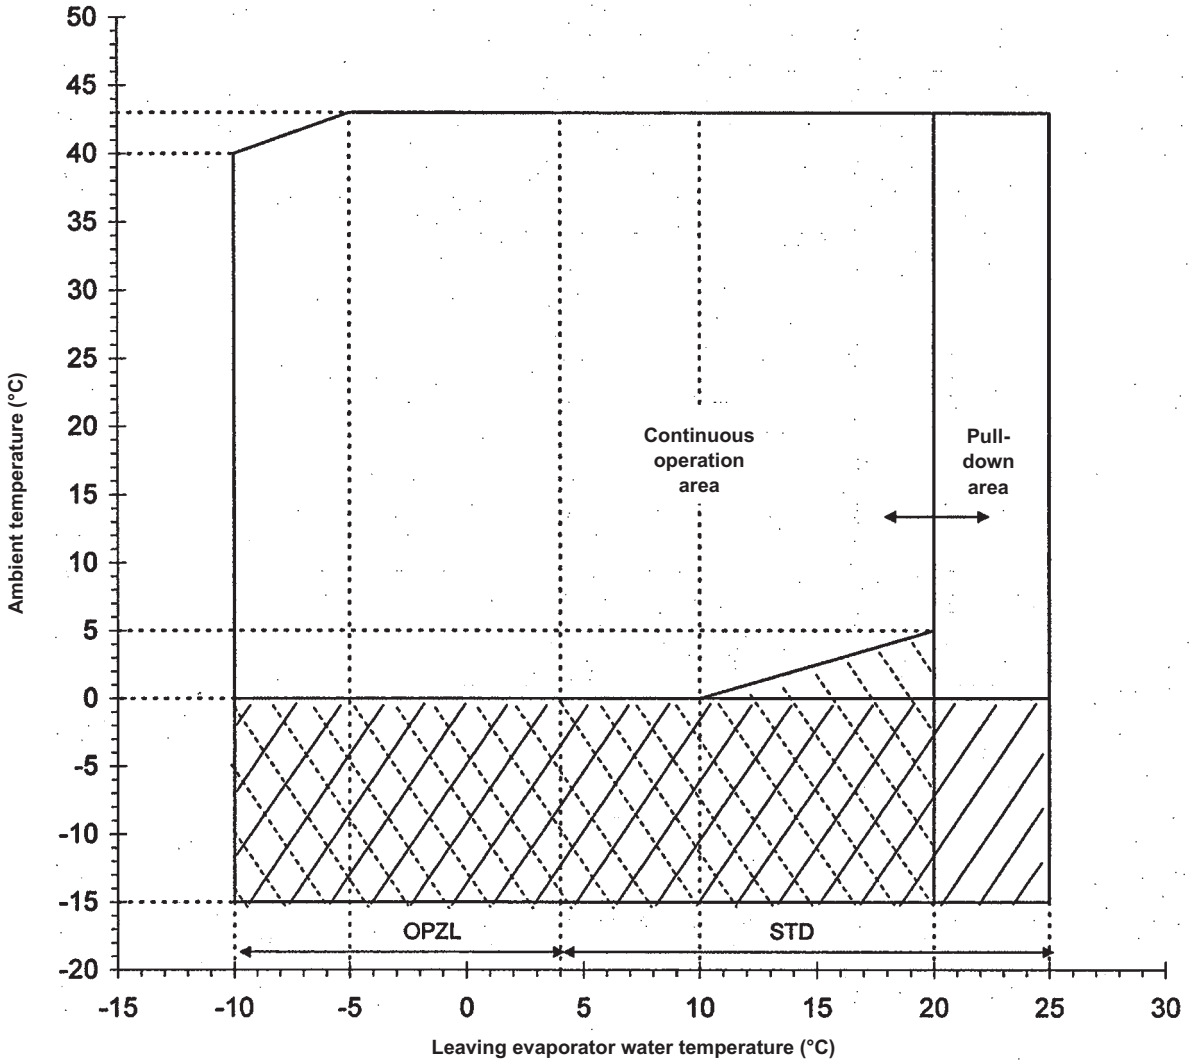
4 Supply water is considered drink water, industrial water and ground water except for genuine water, neutral water and soft water.

5 The above mentioned items are representable items in corrosion and scale cases.

10 Operation range

10 - 1 Operation Range

EWAQ080-100-180-210-240-260DAYN(N-P-B)



STD: Standard unit

OPZL: Leaving water evaporator from -10 to 4°C by use of glycol

Protect the water circuit against freezing by:

* OR OP10: heater tape

* Or filling up the system with a glycol solution

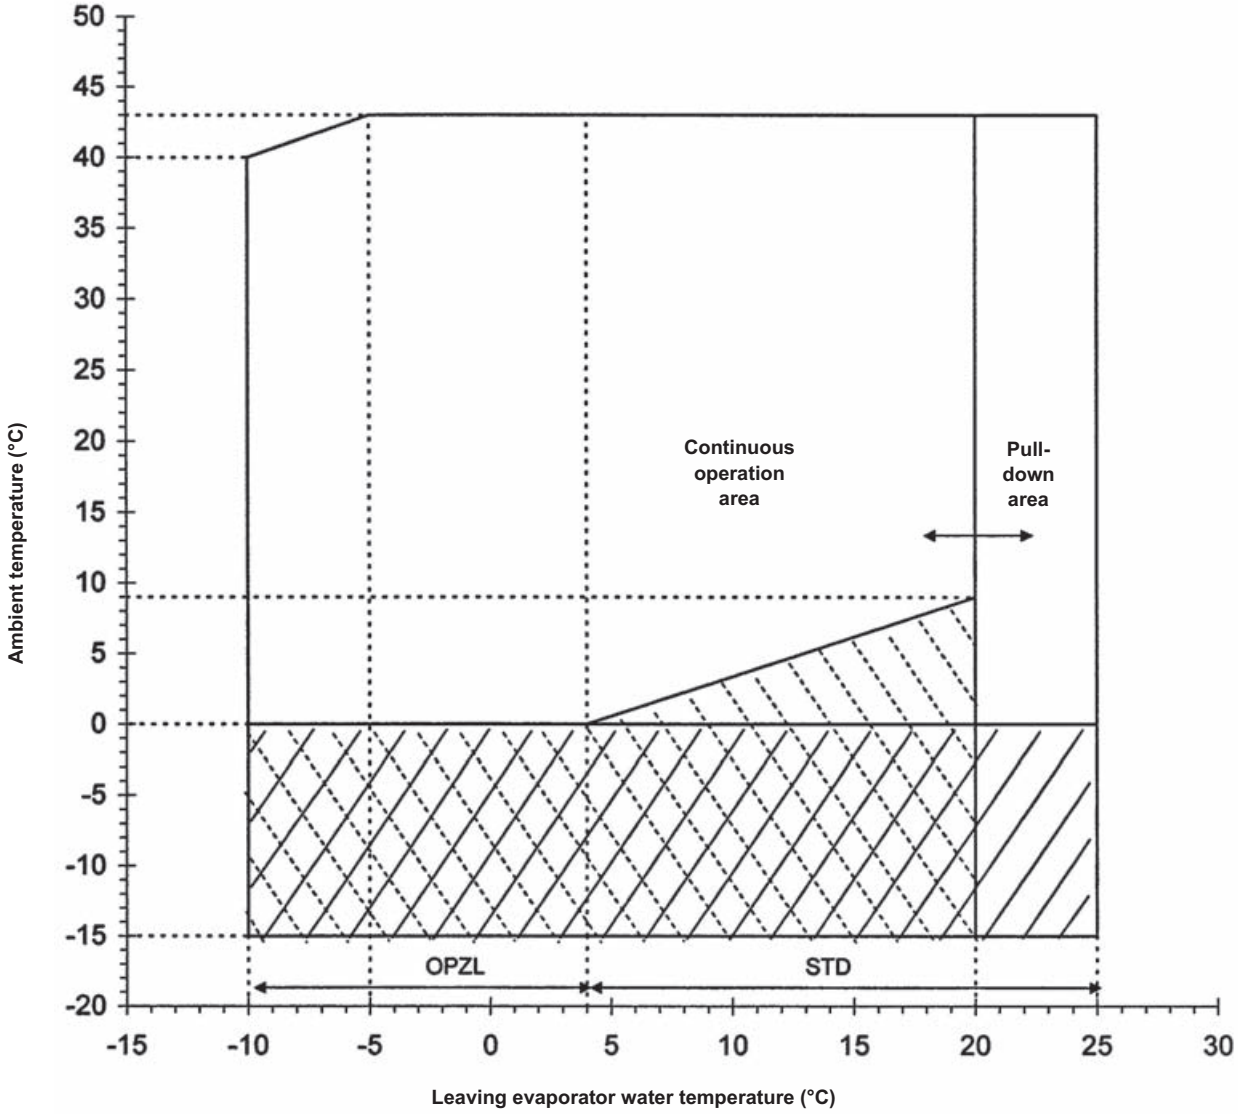
OPIF Option Inverter Fans EWAQ080-100-180-210-240-260

4TW57593-1B

10 Operation range

10 - 1 Operation Range

EWAQ130-150DAYN(N-P-B)



STD: Standard unit

OPZL: Leaving water evaporator from -10 to 4°C by use of glycol

Protect the water circuit against freezing by:

* OR OP10: heater tape
* Or filling up the system with a glycol solution

OPIF Option Inverter Fans EWAQ130-150

TABLE OF CONTENTS

EWYQ-DAYN

1 Features

- Wide capacity range: 80 to 250kW with 8 heat pump models
- Optimised for use with R-410A
- Multiple refrigerant circuits and multiple compressors per circuit
- Reliable and efficient scroll with high EER values
- Anti-corrosion treated aluminium coils
- Low operating sound level
- Easy 'plug and play' installation
- Unit dimensions allow easy transportation
- Fans protected against abnormal operation (4 to 8 fans depending on unit size)
- Safety valves in each circuit
- Electronic circuit breakers
- Electronic expansion valve
- True dual plate brazed plate heat exchanger
- Sight glass
- All hydronics can be accessed easily from 3 sides (no surrounding cabinet)
- Separate switchbox for easy access
- Compressors and controls at unit side
- Increased reliability via 2 independent refrigerant circuits
- Non hermetic filter/dryer
- Daikin Pcaso controller with user friendly and powerful LCD interface

Notes

(1) Cooling: entering evaporator water temp. 12ºC; leaving evaporator water temp. 7ºC; ambient air temp. 35ºC; standard: Eurovent

(2) Cooling: entering evaporator water temp. 12ºC; leaving evaporator water temp. 7ºC; ambient air temp. 35ºC; standard: Eurovent; Power input compressors + fans + electrical circuit

(3) Minimum required water volume for standard thermostat settings and at nominal conditions.

(4) Heating: entering condenser water temp. 40ºC; leaving condenser water temp. 45ºC; ambient air temp. 7ºCDB, 6ºCWB; standard: Eurovent

(5) Heating: entering condenser water temp. 40ºC; leaving condenser water temp. 45ºC; ambient air temp. 7ºCDB, 6ºCWB (= power input compressors + fans + electrical circuit); standard: Eurovent

(6) Supplied by factory installed transformers

(7) Initial starting current = maximum running current 4 fans (1 circuit) + starting current 1 compressor

(8) Maximum starting current = maximum running current 4 fans + maximum running current 3 compressors + starting current 1 compressor

(9) See separate drawing for operation range

(10) Control circuit voltage: AC (supplied by factory installed transformers)

(11) Initial starting current = maximum running current 3 fans (1 circuit) + starting current 1 compressor

(12) Maximum starting current = maximum running current 6 fans + maximum running current 3 compressors + starting current 1 compressor

(13) Control circuit voltage: 24AC (supplied by factory installed transformers)

(14) Maximum starting current = maximum running current 8 fans + maximum running current 3 compressors + starting current 1 compressor

SYMBOLS

CC : Cooling capacity (kW)
PI : Power input (kW)
LWE : Leaving Water Evaporator temperature (°C)
Tamb : Ambient temperature (°C)

NOTES

1. Cooling capacity (CAP)
   Capacity is according to Eurovent rating standard 6/C/003-2006 and valid for chilled water range Dt = 3 - 8°C
2. Power input (kW)
   Power input is total input according to Eurovent rating standard 6/C/003-2006: Compressor + fans + control circuit
3. For units with integrated heat pump
   Values for CC are to be multiplied by 0.99 in order to compensate heat input of the pump

SYMBOLS

CC : Cooling capacity (kW)
PI : Power input (kW)
LWE : Leaving Water Evaporator temperature (°C)
Tamb : Ambient temperature (°C)

NOTES

1. Cooling capacity (kW)
   Capacity is according to Eurovent rating standard 6/C/003-2006 and valid for chilled water range Dt = 3 - 8°C
2. Power input (kW)
   Power input is total input according to Eurovent rating standard 6/C/003-2006: Compressor + fans + control circuit
3. For units with integrated heat pump
   Values for CC are to be multiplied by 0.99 in order to compensate heat input of the pump
4. Usage of glycol and other anti-freeze
   Correction factors for CC and PI are applicable according type and concentration of the used anti-freeze

NOTES

1. Heating capacity (CAP)
   Capacity is according to Eurovent rating standard 6/C/003-2006 and valid for heated water range Dt = 3 - 8°C
2. Power input (kW)
   Power input is total input according to Eurovent rating standard 6/C/003-2006: Compressor + fans + control circuit
3. HC tabulated does not include capacity drop during frosting period and defrost.
   The integraded Heating Capacity takes into consideration the capacity drop during frosting period and defrosting operation.

   ($HC_{integrated}$ = (HC) * (Integraded correction factor during frosting period)

   Integrated heating capacity means the heating capacity during one cycle (between defrosting period and defrosting period), which is integrated and converted to heating capacity per hour.

   Integrated correction factor

Tamb (°C) RH 85%	-10	-7	-4	0	4	7
Correction factor	0.96	0.95	0.92	0.87	0.90	1.00

4. In case the surface of the heat exchanger is covered with snow, heating capacity drops temporarily although it differs with outdoor temperature (°CDB), relative humidity (RH) and frosting volume.

SYMBOLS

HC : Heating capacity (kW)
PI : Power input (kW)
LWE : Leaving Water Condenser temperature (°C)
Tamb : Ambient temperature (°C)

LEGEND

Translation of this legend can be found in the installation manual.

	Not included with standard unit	
	Not possible as option	Possible as option
Obligatory	#	##
Not obligatory	*	**

: Field wiring

: Several wiring possibilities

: Dipswitch set on left position

Part number		Description
A02P	**	Communication PCB (EKACPG)
A4P		PCB wired remote control
A5P	**	PCB wired remote control (EKRUPG)
E5H	*	fieldheater
F1,F2,F3	#	main fuses
F4,F5	#	fuses for heaters
H11,12,21,22P		indication lamp: operation compressor
H1P	*	indication lamp: alarm signal (default NO)
H2,3,4,5,6P	*	indication lamp for changeable digital outputs
K1P	##	pump contactor (Only OPSP/OPHP/OPSC/OPTP/OPTC)
K2P	**	pump contactor (Only for OPTP/OPTC)
K1S	*	overcurrent relay pump (P/B unit or OPSC)
M1P	*	pump motor 1 (Only OPSP/ OPHP/OPSC/OPTP/OPTC)
M2P	*	pump motor 2 (Only for OPTP/OPTC)
R8T	*	temperature sensor for changeable analog input
S1M		main isolator switch
S1,2,3,4,5S	*	switch for changeable digital input
S2M	#	heatertape isolator switch
V2C	**	ferrite core (EKACPG)

Options (factory installed)	
OPSP	=Single pump
OPTP	=Twin pump
OPSC	=Single pump contactor
OPTC	=Twin pump contactor
OPHP	=Hi ESP pump
OPIF	=Inverter fans

Options (user installed)	
EKACPG	=Address card including
	-RS 485 (Integrated modbus)
	-F1,F2 (DCIN+DBACS connection)
EKRUPG	=Remote user interface

N-Model	=unit with no options included
Ch.	=Changeable

Changeable I/O possible functions

Refer to the installation manual for instructions how to configure changeable I/O

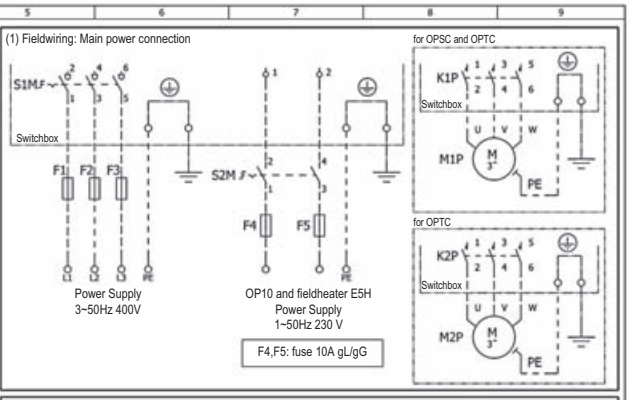
Changeable digital input (4 available)
-None -Status -Dual setpoint -Remote on-off -Capacity limitation 25%,50%,75% or setting -Low noise (only for OPIF) -Free cooling signal -Fan forced on

Changeable analog output (1 available)
-None -Unit Capacity (mA,V) -Details of types Type mA: 0..20mA/4..20mA Type V: 0-1V/0-5V/0-10V

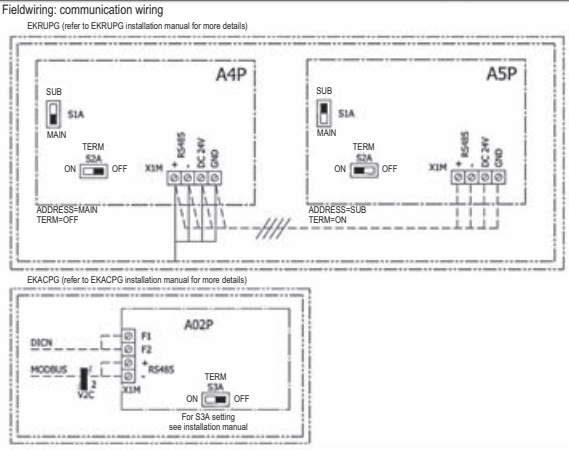
Changeable digital output (6 or 5 available depending on unit)
-None -Closed -2nd pump -100% capacity -Full capacity -Free cooling -General operation -Safety+warning NO -Safety+warning NC (only for Ch.DO1) -Safety NO (excluding warning) -Safety NC (excluding warning) (only for Ch.DO1) -C1,C2 Safety NO -Warning NO -C1,C2 operation -Cooling (only EWYQ) -Heating (only EWYQ) -Defrost (only EWYQ

Changeable analog input (4 available)
-None -Status (mA,V,NTC*,DI) -Floating setpoint (mA, V, NTC*) -Water temperature measurement (NTC*) -Changeable DI, refer to Ch DI for possibilities (DI) -Details of types: Type mA: 0..20mA/4..20mA (internal 5V or external power supply) Type V: 0-1V/0-5V/0-10V Type DI: DI (5V detection) *: for allowed NTC types and how to configure the software please contact your local dealer.

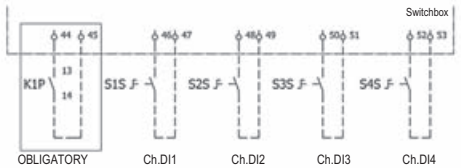
(1) Fieldwiring: Main power connection



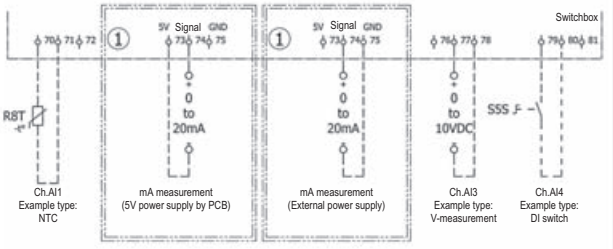
(1) Fieldwiring: communication wiring



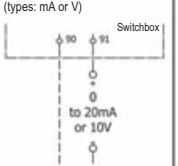
(3) Fieldwiring: Digital input terminals



(4) Fieldwiring: Analog input terminals
(connection is depending on type setting: NTC or mA or V or DI)



(5) Fieldwiring:
Analog output terminals
(types: mA or V)



(6) Fieldwiring: Output terminals

NOTES

1 Values of Sound power according to ISO9614-2

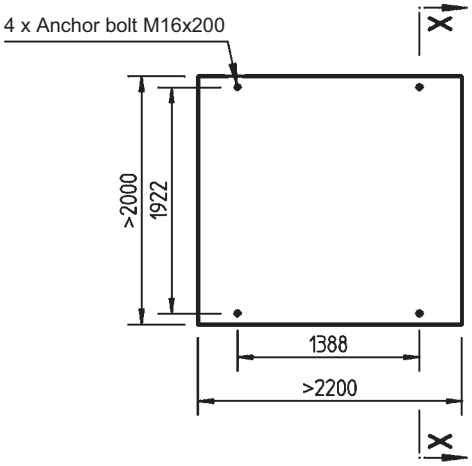
2 LWE= Leaving Water Evaporator temperature (°C)
Tamb= Ambient temperature

4TW57577-1C

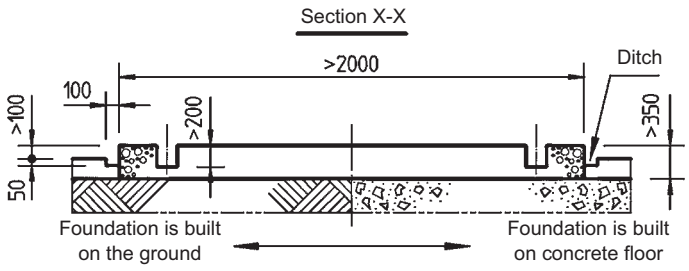
9 Installation

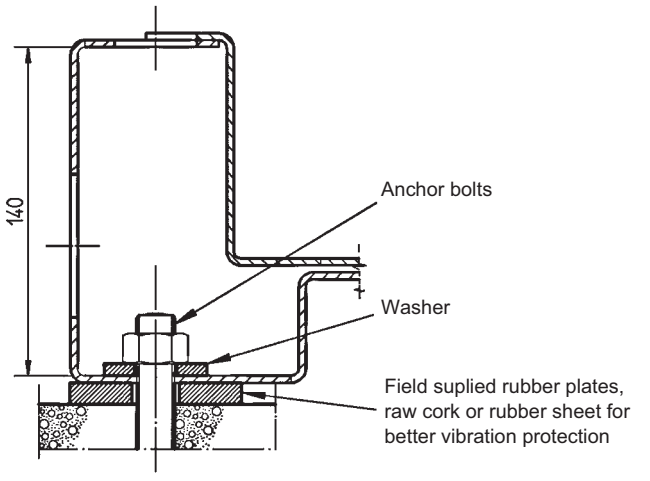
9 - 1 Fixation and Foundation of Units

EWAQ-EWYQ080-150DAYN(N-P-B)



Fix anchor bolts into the concrete foundation. The concrete foundation should be higher than the floor level by approximately 100 mm for ease of plumbing work and better drain. Further, strength of the floor should be sufficient to support the weights of concrete foundation and unit.
Be certain that foundation surface is even and flat.





NOTES

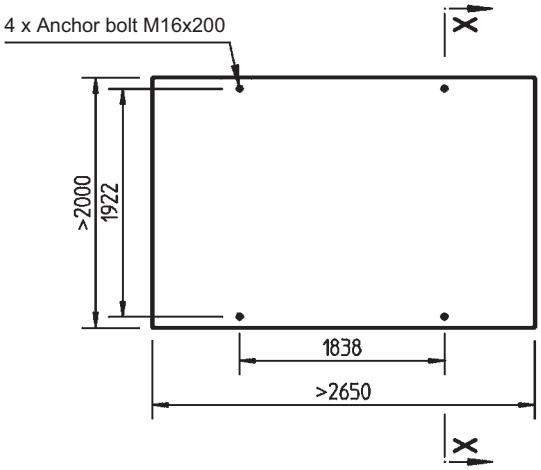
1 The measurement tabulated is based on the fact the base is made in the ground or on a concrete floor. In case the base is made on a concrete floor. In case the base is made on a rigid concrete floor, it is possible to include thickness of concrete floor, in that of the base.
2 In case a base is made on concrete floor, be sure to provide a ditch as shown. It is important to extract drainage regardless of wether a base is made in the ground or on the concrete floor. (Ditch → Sewerage).
3 Ingredient ratio of the concrete is cement: 1, sand: 2, gravel: 3, which is standard and insert iron bars of ∅10 at every interval of 300mm. The edge of the concrete base should be planed.

4TW57599-1

9 Installation

9 - 1 Fixation and Foundation of Units

EWAQ-EWYQ180-210DAYN(N-P-B)



Fix anchor bolts into the concrete foundation. The concrete foundation should be higher than the floor level by approximately 100 mm for ease of plumbing work and better drain. Further, strength of the floor should be sufficient to support the weights of concrete foundation and unit.
Be certain that foundation surface is even and flat.

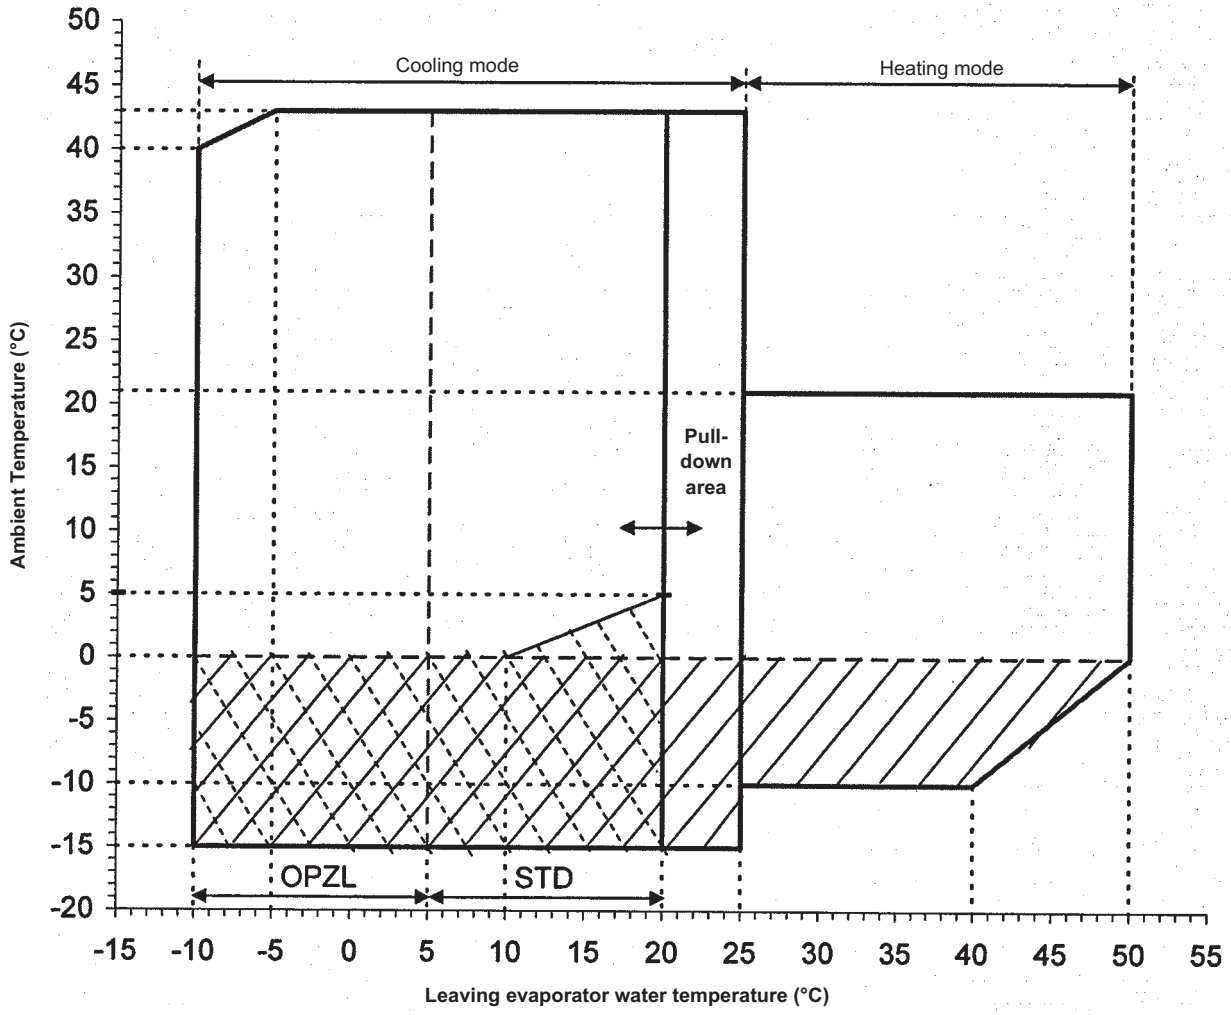
3TW50179-1

1 Names, definitions and units are according to JIS K 0101. Units and figures between brackets are old units published as reference only.
2 In case of using heated water (more than 40°C), corrosion is generally noticeable.
Especially when the iron material is in direct contact with water without any protection shields, it is desireable to give the valid measures for corrosion. e.g. chemical measure.
3 In the cooling water using hermetic cooling tower, closed circuit water is according to heated water standard, and scattered water is according to cooling water standard.
4 Supply water is considered drink water, industrial water and ground water except for genuine water, neutral water and soft water.
5 The above mentioned items are representable items in corrosion and scale cases.

10 Operation range

10 - 1 Operation Range

EWYQ080-100-180-210-230-250DAYN(N-P-B)



STD: Standard unit

OPZL: Leaving water evaporator from -10 to 5°C by use of glycol

Protect the water circuit against freezing by:

* OR OP10: heater tape

* Or filling up the system with a glycol solution

OPIF: Option Inverter Fans EWYQ080-100-180-210-230-250

4TW57719-9A

Daikin's unique position as a manufacturer of air conditioning equipment, compressors and refrigerants has led to its close involvement in environmental issues. For several years Daikin has had the intention to become a leader in the provision of products that have limited impact on the environment. This challenge demands the eco design and development of a wide range of products and an energy management system, resulting in energy conservation and a reduction of waste.

Daikin products are distributed by:

Daikin Europe N.V. participates in the Eurovent Certification Programme for Air Conditioners (AC), Liquid Chilling Packages (LCP) and Fan Coil Units (FC); the certified data of certified models are listed in the Eurovent Directory. Multi units are Eurovent certified for combinations up to 2 indoor units.
